

LONESTAR ECOLOGY LLC

CES TANK PROPOSAL

3-3-15

Gary,

As we discussed, Lonestar Ecology is working to see if we can manage all of the tanks in the tank farm area of the CES site.

Clarification:

Would EPA disconnect the walkways and piping from the tanks?

All tanks would have to be cleaned to a level that they could be sent for recycling, if warranted. Can EPA supply documentation of the tanks being cleaned?

Will EPA be ok with the unusable tanks being sheared on site prior to being sent for recycling?

Would the EPA do an asbestos test on the tank insulation and supply asbestos free documentation?

Let me know what you think.

Sincerely

Dean Lewis

VP of Sales
